Wilderness Urban Disaster First Responder

Hello from Sierra Rescue!

Our Wilderness and Urban Disaster First Responder course is designed with the outdoor professional and urban citizen in mind. It focuses on developing skills for treating problems outside the "golden hour" of first response, under extreme conditions or when forced to improvise. This could be in a remote mountain setting, or in a huge city when there is a disaster that requires more medical resources than are available. The course is based on the protocols set by the Wilderness Medical Society and instruction encourages the students ability to think through body systems in an effort to determine the best response to traumatic, environmental or medical situations. Classroom sessions are followed with hands on practice to integrate the information in a field setting. 100% attendance is required and there will be a night scenario included. The students will get to see their skills in action, as video coverage of intensive scenarios will be reviewed towards the end of the class. A comprehensive written exam is also administered. The course includes AEHS adult, child and infant CPR certification, which is OSHA approved.

We will be spending quite a bit of time outside (possibly rain, hopefully sun, etc.). You will be getting dirty during many of the skills sessions and simulations. Bring clothing appropriate to the weather. It should be tough enough to withstand a beating, get your hands dirty and keep you warm or cool depending on weather conditions.

You will need to bring:

- Notebook, pen, pencil
- Watch
- Two full sets of old clothing (two long sleeve shirts, two long pants, two t-shirts) that can be cut up and dirtied with fake blood for scenarios
- Backpack big enough for course materials and other gear as we will be on the move to various different sites around campus
- Water bottle
- Snacks
- Camp chair or crazy creek chair if you have one
- On some days (not the first day) you may be asked to bring gear that you would have when you are out playing to practice splinting and using for other uses. This is totally optional as we will have lots of gear there, but it is nice to know how YOUR gear works as a wilderness medicine tool. Example: trekking poles, paddles, snow shovels, snowshoes, skis, axes, backpacks, chairs, sleeping pads.

Expectations and Certification: PLEASE READ CAREFULLY

Your full attention and participation will be required in the course. This curriculum and class time can exceed 10 hours a day with the required homework. The WFR will need your full commitment for the duration of the course. There will be simulations in which you are required to act as patient and as a rescuer; this requires physical contact where you will touch and be touched. You should also be physically capable of lifting 50 pounds without injury. You will be reading, writing and communicating with other students.

This is a **VERY** interactive course. To protect your personal space you should wear your jog bra, bathing suit, boxers/ and or shorts (these will not be cut) under your simulation clothes for all Patient Assessment Skills labs. You are responsible for your emotional and physical safety at all times.

Sierra Rescue presents skills and techniques according to practice guidelines established by the Wilderness Medical Society as outlined in the Wilderness Medical Society Practice Guidelines. Sierra Rescue is not liable if you do not adhere to those standards in a field situation, nor can we authorize you to use the skills presented. Your authorization will need to come from a licensed medical control.

When you have successfully completed the Wilderness First Responder Course, you will receive a certification card from Sierra Rescue. This card acknowledges that you have successfully demonstrated the skills presented during your course according to the above practice guidelines. It does not certify that you will be able to perform at that level. It is your responsibility to stay current with both your understanding and practice. Most medical control personnel require certification as a baseline for authorization.

Your certification will be valid for three years. You **MUST** recertify within this three-year period at a course specifically designed as a "Wilderness First Responder Recertification" course. Your Sierra Rescue certification will be recognized world-wide! When you go to Re-Certify, you may Re-Certify with a responsible and recognized provider of Wilderness Medicine Instruction. We recommend that you go to a three-day recertification course. If you fail to recertify within the three year time period, you will have to take the FULL 80 WFR again. Do not ever let your WFR expire!

You will be asked to sign an "Agreement of Responsibility" that acknowledges your understanding of the above information on the first day of your course.

What the course includes:

The course price includes instruction, patient SOAP notes, case studies and the text/field

manual. It includes all lab materials and all supplies; except for personal clothing. Please feel free to contact us with any questions that you may have.

Objectives and Outline

GOAL: Our Wilderness First Responder course is designed with the outdoor professional and outdoor enthusiast in mind. It focuses on developing skills for treating problems outside the "golden hour" of first response, under extreme conditions or forced to improvise. It is based on the protocols set by the Wilderness Medical Society and instruction encourages the students ability to think through body systems in an effort to determine the best response to traumatic, environmental or medical situations. Classroom sessions are followed with hands on practice to integrate the information in a field setting. 100% attendance is required and there will be a night scenario included. The students will get to see their skills in action as video coverage of intensive scenarios will be reviewed towards the end of the class. A comprehensive written exam is also administered. The course includes AEHS adult, child and infant CPR certification which is OSHA approved.

COURSE OBJECTIVES

Some of the many skills student will be able to do:

- -Understand basic Anatomy and Physiology
- -Perform solid CPR and BLS skills
- -Make an improvised splint
- -Clean and manage wounds in the backcountry
- -Know how to clear someone who has MOI for spinal injury
- -Be able to package patients on both backboards and litters
- -Understand allergic reactions and when and how to administer epinephrine
- -Recognize serious trauma injuries
- -Recognize serious environmental issues
- -Recognize serious medical issues
- -Make improvised litters and alternative carrying methods
- -Triage and know how to handle mass casualty incidents
- -Pass final written exam
- -Pass final practical exam

WUDFR OUTLINE

Basic Life Support Skills/ Anatomy and Physiology

- Opening and Course Paperwork
- Course Introduction and Expectations
- Student and Instructor Introductions
- Medical Legal Overview
- Evolution of Patient Care System and how WFR's fit in
- Patient Assessment System (PAS) Part 1 How to approach a scene!

- General Review of Anatomy and Physiology (All Systems)
- Specific exploration of Respiratory System
- Hands on practice establishing an airway/airway management
- Specific exploration of the Circulatory System
- Hands on practice for checking for pulse, controlling bleeding, cpr
- Specific exploration of Nervous System
- Evaluating Level of Consciousness and maintaining Spine stability
- Optional Examination of a pig's heart, lungs, kidneys and liver
- Basic Life Support Lab / AED's/ AEHS CPR testing

Traumatic Injuries

- Understanding the Inflammatory Response/ Review of cellular physiology
- Autonomic Stress Response/Acute Stress Response
- Nervous System injuries/ Increased ICP, Concussion, Head wounds, Unstable Spine
- Respiratory injuries/ Respiratory distress
- Circulatory Injuries/ Volume Shock
- Stable and Unstable Musculoskeletal Injuries
- Patient Assessment System (PAS) Part 2
- Hands on field exercises/ Two on One Patient Assessment : 3 Rotations
- Quiz 1 -Wounds, Infections, Burns
- Pigs Foot Lab/ Includes wound irrigation, punctured objects and fish hook removal
- Exploration of the Musculoskeletal System/ Anatomy and Physiology
- Stable and Unstable Musculoskeletal Injuries
- 1:1 Splinting Lab -Spine Assessment and Lab/ A conservative process for checking the spine
- Dislocations Lab

Environmental Injuries

- Spine ruling-out quiz
- Hypothermia
- Heat Problems (Heat Stroke, Heat Exhaustion, Electrolyte Sickness, Sunburn)
- Cold Injury (Frostbite, Trench Foot, Chilblains)
- Near Drowning
- Spine Management Lab/ Moving spine injured patients, back-boarding, litters
- Quiz 2 -Toxins, Bites and Stings/ Includes BBC video
- Anaphylaxis/Allergies
- Injections Lab
- Altitude
- Lightning -More two on one patient field assessments: 3 rotations

Introduction to Medical

- Quiz 3 -Introduction to medical problems
- Infectious diseases -Gastrointestinal System/ Anatomy and Physiology and Problems (diarrhea,

- constipation, ulcers, hernias, signs and symptoms of serious problems)
- Genitourinary System/ Anatomy and Physiology and Problems (UTI, vaginitis, testicular torsion, pregnancy)
 - Diabetes
 - Ears, Eyes, Nose and Throat/ Teeth Problems
 - Asthma -Heart Attack, Angina BBC Video
 - Stroke -Seizures
 - Mini-Medical Scenarios
 - Improvised Litters and Final Written Exam
 - Improvised Litters /Carries and Passes
 - Obstacle course with litters constructed
 - Triage lecture and drill
 - Mass Casualty scenario
 - Final Written Test

Improvised Litters and Final Written Exam

- Improvised Litters /Carries and Passes
- Obstacle course with litters constructed
- Triage lecture and drill
- Mass Casualty scenario
- Final Written Test
- Video Simulation #1
- Debrief VS #1
- Video Simulation #2
- Debrief VS #2

Video Simulation #3 and Course Closure

- Debrief Night Scenario -Video Simulation 3
- Review of Written Exam -Medical Equipment, First Aid kits, Survival kits
- Finish any testing -Course Debrief/ Cleanup and Closing

Additional Information:

Fake blood and make-up is used to create realistic wounds, bruising and bleeding. Students will need at least one or two pairs of clothes that may be cut and stained. All scenarios are created with realistic outdoor scenarios and patients will be in role. Various materials from expedition type gear will be used for splinting, hypo- wraps and insulating patients from the environment.

The video simulations will allow students to work through their simulations and be able to review immediately afterward. The pressure of being filmed will add an element of anxiety, which would be there in a real incident.

YOUR INSTRUCTORS

Sierra Rescue is committed to providing quality rescue instruction based on integrating information into practical skills while developing the ability to think through complicated wilderness and rescue problems. We integrate knowledge into practical field exercises that work on developing judgment as well as providing hands on training.

OUR EXPERTISE

Sierra Rescue was founded in order to offer quality professional courses for a multitude of individuals. We specialize in designing the best rescue course for each group's specific needs. We are flexible with our curriculums and love the challenge of creating a course that is perfect for the environment and activities that you do. Sierra Rescue offers you the skills and the certification that you and your organization need. We also travel to your site or pick a site near you that would be appropriate. We have over 28 years of experience as front country and wilderness EMTs, wild-land and structure fire fighters, river guides, climbing and mountaineering guides, instructors in outdoor leadership, members of search and rescue teams. With our diverse background and our 15 years of teaching experience we strive to offer you the best and most fun course for your time and money. We are very passionate about what we do! Please feel free to contact us at any time with any questions about the course or curriculum.
